I had a Windows 2000 installation, and you had to. [Thermographic evaluation of the effect of selective alpha- and beta-blockade on the development of neuralgia in the trigeminal branch of the cranial nerves during orthodontic procedures]. In 41 patients with trigeminal neuralgia pain in 2 locations in the maxillary nerve with or without involvement of the mandibular nerve were treated by surgery and by medication with non-selective or selective adrenergic blocking agents. The results were evaluated from serial thermographic recordings. Changes in pain patterns were observed immediately after treatment, which remained constant during the following 4 weeks of follow up. The severity of pain at baseline was found to be an important factor for the therapeutic outcome. Selective alpha-blocker treatment was successful in suppressing pain in a majority of the patients, whereas beta-blockers had little or no effect. This study confirms the results of earlier investigations in the literature, which demonstrated the efficacy of certain pharmacological approaches in treating f678ea9f9e
